

**Table 2. Natural communities of Cumberland County and sites where they occur**

Note: ranks apply only to the “parent” community, and not to the variant. For example, Mesic Pine Flatwoods Little River Variant has an N.C. rank of S3 and a Global rank of G5 (see rank explanations at end of table). These ranks apply to Mesic Pine Flatwoods and all of its variants collectively. Separate ranks have not yet been established for the variants (or for some subtypes), several of which are uncommon or rare.

Community association
